Test log

Document: evidence/MOB_A2_2528255_TEST_LOG.pdf · Student: Teta Erssie · Registration: 2528255 · Date: 12 October 2026

Item	Record
App	TetaPortfolio 1.0.0
Package	rw.ac.ines.ug2528255.tetaportfolio
Verification code	MOB-A2-8255
Build profile	eas.json → preview → Android APK (installable without Expo Go)
APK file name	MOB_A2_2528255.apk (attached to GitHub release v1.0.0, not committed)
Source check	npm run typecheck (tsc --noEmit) passed on 12 October 2026
Tested device	**Not yet recorded**
Android version	**Not yet recorded**

How to read the result column. Pass (source) means the behaviour is present in the submitted TypeScript and the project type-checks. Awaiting device means the check can only be closed on the installed APK: launch without Expo Go, restart, camera or gallery, and Airplane Mode. Those rows are not marked Pass in this log. The demonstration video is the place they are shown.

Scope

The cases follow the ten required features and the demonstration checklist. Portfolio content used in the checks is the bundled data: seven skills, three education entries, and the projects TetaPortfolio and MilkCheck.

ID	Case	Expected result	Result
T01	Home identity	First sentence is “My name is Teta Erssie.” Headline, biography, availability, portrait or initials, and MOB-A2-8255 are visible.	**Pass (source)**
T02	Skills and education	About me shows at least five skills (seven are bundled) in SkillCard, and an education timeline in TimelineItem. Empty copy exists if a list is empty.	**Pass (source)**
T03	Projects and detail stack	Work lists TetaPortfolio and MilkCheck. Opening a card shows problem, contribution, technology and outcome. Back returns to the list. An unknown id shows the empty state.	**Pass (source)**
T04	Validation – too short	Clear the headline and leave the field. Message: “Headline is required.” or the 10-character rule. Save shows “Fix the highlighted fields before saving.” and does not write storage.	**Pass (source)**
T05	Validation – biography	A biography under 40 characters, over 300, or containing a link or email is rejected with a field message. A 40–300 character biography with no link is accepted.	**Pass (source)**
T06	Validation – skill and availability	Primary skill must be 2–40 characters and only letters, numbers and + # . - / &. Availability must be one of the three statuses.	**Pass (source)**
T07	Valid save	A valid change shows “Profile saved on this device. It will still be here after a restart.” Home and About me show the new headline.	**Pass (source)**
T08	Restart	Force-close the app and open it again. The saved headline, biography, skill, availability and photo reference are still there.	**Awaiting device**
T09	Reset	Reset saved profile asks for confirmation, deletes the stored profile and photo, and restores the default text.	**Pass (source)**

ID	Case	Expected result	Result
T10	Gallery or camera	Choosing a photo shows a preview. Replace swaps it. Remove asks for confirmation and returns the initials avatar after save.	**Awaiting device**
T11	Permission denied	Denying camera or library shows a warning that the current photo was kept. If the system will not ask again, Settings can be opened. The rest of the app still works.	**Pass (source)**
T12	Picker cancelled	“No photo selected. Nothing was changed.”	**Pass (source)**
T13	About screen	Shows TetaPortfolio, Teta Erssie, 2528255, MOB-A2-8255, version 1.0.0 and the data-use statement. Data stays on the device.	**Pass (source)**
T14	Offline links	GitHub and LinkedIn rows say they need a connection. Contact me on Home has the same hint. Core screens do not fetch portfolio content.	**Pass (source)**
T15	Airplane Mode	With Airplane Mode on, Home, About me, Work, one project detail and Info still open. The device clock is visible in the video. Opening a link fails with a clear message.	**Awaiting device**
T16	Standalone launch	The installed MOB_A2_2528255.apk opens from the Android launcher. Expo Go is not running.	**Awaiting device**
T17	Package and profile	app.json package is rw.ac.ines.ug2528255.tetaportfolio. eas.json preview profile sets android.buildType to apk.	**Pass (source)**
T18	TypeScript	npm run typecheck completes with no errors.	**Pass – 12 Oct 2026**
T19	Large text	Body text is allowed to scale. Rows wrap. Tab labels cap at 1.2× so the dock stays on screen. Touch targets stay at least 48px.	**Pass (source)**
T20	Secrets	No passwords, tokens or private API keys are stored. AsyncStorage holds only the edited profile and a local photo reference.	**Pass (source)**

Physical device — still open

These four checks are part of the demonstration and are not marked Pass until they are done on the installed APK. Record the phone here, then film them in one continuous video of at most two minutes.

Field	Entry
Device name	**To be written after the test**
Android version	**To be written after the test**
Install result	**T16 — not yet run**
Restart result	**T08 — not yet run**
Photo result	**T10 — not yet run**
Airplane Mode result	**T15 — not yet run**
Tester	Teta Erssie
Date of source review	12 October 2026

Order for the demonstration video

1. Handwritten card: Teta Erssie, 2528255, TetaPortfolio, MOB-A2-8255.
2. Open the installed APK from the launcher, without Expo Go.
3. Show “My name is Teta Erssie.”, the portfolio, and one project detail.
4. Trigger one validation error, then save a valid profile change.
5. Close and reopen the app. The change is still there.
6. Show the profile-photo preview.
7. Turn on Airplane Mode, show the portfolio and the device clock.

File name for the video: MOB_A2_2528255_DEMO.mp4, attached to GitHub release v1.0.0. It is not stored in the repository.
